

Tired of High
Gas Prices?

Want to Save
Money?

Here is the
Solution...

THE FUEL GENIE

What is it?

The Fuel Genie is an air accelerator constructed of high grade automotive polyurethane. It combines two scientific principles; the Vortex and the Venturi to achieve Bernoulli's Law. Non-moving fins spiral as the diameter decreases. The resulting whirling effect produces a better air-fuel mixture, improves air flow, decreases emissions and increases horsepower and torque.

Many satisfied users have reported fuel savings of 10-25% or an extra 75-100km on a full tank of fuel.

For best results, 2-3 tanks of fuel should be consumed. This aids in the removal of carbon deposits and allows for higher engine performance.

Cleaner
Emissions

Added
Horsepower

Increased
Gas Mileage

"I put The Fuel Genie in my Suburban my onboard computer tells me that my average usage went from 18.2 L/100km to 15.7 L/100km. That's about \$20 per tank of gas. I'm sold!"

-James Krane
Milton, ON

"This truck, since new, had been averaging 7mpg. Since the installation of The Fuel Genie, it has been checked at the dealership twice and shows an average of 7.8mpg, along with noticeable increase in horsepower with heavier loads."

-Anita Townsend
Markdale, ON
