

Hot summer market continues

Sales see double-digit growth

ecently the Bank of Montreal's well-known chief economist, Douglas Porter, got some laughs with his parody of the Rolling Stone's classic song, *Sympathy for the Devil*. Porter's version poked fun at the housing bears who have been warning for some time that a crash is imminent. "Please allow me to introduce myself/I'm a bear of stealth and haste/I've been around for long, long years/Stole many homebuyer's soul and faith," wrote Porter. "Got it wrong last year too/Though I'll keep saying the same/Ah, but truly scaring you/Is the nature of my game."

Porter admits that the housing boom in Toronto cannot go on at this pace forever, but in the near future he believes interest rates are unlikely to see a huge jump. Demand for housing in the GTA remains strong.

In July, home sales in the GTA were up by 10 per cent compared to the same time last year. In the 905 regions, sales were up by 11.1 per cent.

In the City of Toronto, the average detached home sold for \$880,433, up 11 per cent from a year ago. The average detached home in the 905 regions was \$638,864, up 7.3 per cent. Semi-detached homes also sold well, at an average price of \$635,311 in the city and \$452,536 in the 905 regions.

Townhouses in the GTA sold for an average of \$425,596, an increase of seven per cent compared to last July, while condo apartments averaged \$357,345, up 5.3 per cent.

"Annual average price growth remains in the high single-digits or low double-digits for many home types across the GTA," says the Toronto Real Estate Board's senior analyst, Jason Mercer. "It is possible that we could see more choice for buyers in

choice for buyers could serve to gradually ease the pace of price growth in some market segments."

While earlier generations were happy to cash in the built-up equity in their homes and move to smaller houses, condos or out of town, it appears the baby boom

the second half of 2014 in the form of increased new listings. A sustained increase in

While earlier generations were happy to cash in the built-up equity in their homes and move to smaller houses, condos or out of town, it appears the baby boom generation in Toronto is less inclined to move. They are staying in their large homes and often renovating them to suit their needs. The result has been fewer homes on the market.

Porter says that the boomers' children, who have lived at home longer than past generations, are now in their prime house-buying years and will continue to boost the real estate market. Generally the echo boomers are in better financial shape than their parents were at the same age and can afford a home despite the rising prices during the past decade. REU

Home safety

Toronto has fewest break-ins in Canada security tips

tatistics Canada reported that break-ins in Toronto dropped by 20 per cent in 2013 compared to the year before to a rate of 227 per 100,000 population. That is the best rate in the country (tied with Barrie) and well below the national average of 445 per 100,000 population.

Although the rate of breaking and entering is dropping

every year, the police still get thousands of break-in calls. The police tell homeowners that the most effective way to prevent a break-in is to know what burglars look for and then make sure your house doesn't seem enticing to them.

Criminals look for landscaping and dark areas around doors and windows, so they won't be seen from the street when they break in. They look for signs that people are away, such as a mailbox full of flyers or a walkway that hasn't been shovelled in winter. Open garage doors, ladders or garbage bins that give access to the second-floor and open curtains that show the treasures inside are all temptations that a burglar may not be able to resist.

Police say more experienced criminals know which door styles and locks are easy to break. Homes with a good quality deadbolt and security strike plate on the door frame are a lot tougher to breach.

Good lighting, secure locks and neighbours who keep an eye on the community are the best defence against break-ins. REU

Condo update

Condo sales up by over 10% solid price growth

TA condo sales in the second quarter of 2014 were 10.4 per cent higher than at the same time last year, reports the Toronto Real Estate Board (TREB). New listings are up too, but by just 4.4 per cent.

"We are increasingly seeing households choose condos as the place where they will raise a family," says TREB president Paul Etherington. "This diversity of buyers explains why sales more than kept up with increased listings in the second quarter."

TREB reports the average selling price was \$367,010 in the second quarter, an increase of 5.5 per cent compared to 2013. In the City of Toronto, where 71 per cent of the condo sales took place, the average price was \$392,739, an increase of 5.3 per cent.

"We should see enough demand to sustain price growth above the rate of inflation in the second half of the year," says TREB's senior analyst Jason Mercer.

In the downtown core, the most popular condo is a one-bedroom plus den, followed by one-bedroom and then two-bedroom units. The average size of new condos has been shrinking, which makes existing buildings more attractive for young families who are looking for more space. Existing buildings are also more affordable.

There is good news for investors. Condo rental market transactions were up compared to last year, and the vacancy rate is a low 1.7 per cent in Toronto, 1.5 per cent in Peel Region and 2.7 per cent in York Region. REU

a Constitution of the Cons

Income properties

Avoiding bad tenants Advice for landlords

here is a lot of bad press portraying landlords as being greedy, miserly characters who oppress tenants. However, recent media stories present the other side of the coin. There are some bad tenants who know how to use the legal system to avoid paying rent.

If you are one of the thousands of Torontonians who buy income properties and become landlords, make sure you do your homework or you could end up with a nightmare tenant.

Renting property in Toronto is highly regulated and most landlords will tell you that tenancy laws are tilted in favour of tenants. Read the Ontario Residential Tenancy Act so you know what you can and cannot do when renting property.

When advertising for tenants, mention in your ad that you'll complete background and credit checks.

You are allowed to ask prospective tenants for the following information: employment information and income, current address, how

many people will live in the unit, names of people living in the unit, references from friends and relatives. You can ask if they smoke and if they have pets. However, in Ontario "nopets" clauses are not allowed, so if a tenant gets a pet after they move in, you can't evict them unless it damages the unit, causes an allergic reaction or is considered dangerous.

According to Canada Mortgage and Housing Corp., there are some things you cannot ask prospective tenants. These include: race, ancestry, place of origin, or ethnic origin, citizenship, religion, sex, age, marital status, disabilities, or whether they receive public assistance.

Follow through and do a credit check with Equifax or TransUnion. Interview the applicant's references and, if possible, talk to their former landlords. You can also look the

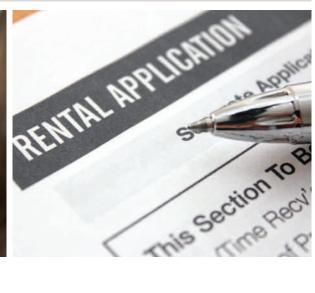

applicant up on Google.

Some landlords check out the applicant's car to see if it is clean and well-maintained. Some chat with the applicant's children to see if they are well behaved.

You can find more tips and advice on the Ontario Landlords Association's website at www.ontariolandlords.org REU

Energy efficiency Tips to save money and reduce consumption

Ithough homeowners can't fight the increases in gas and electricity costs on a larger scale, they can change their behaviour at home to limit their monthly costs. Consider these energy-saving tips to control your gas and hydro bills.

Control your heating and cooling systems

Turn down your furnace in the winter and air conditioner in the summer when you go to bed and when you leave your home. Most people don't require the same temperature to sleep comfortably as they do when they're awake. Take advantage of your blanket and turn the heat down when you get under the covers.

Don't forget your filter

Change your furnace and air conditioner filters on a monthly basis. Furnace filters help to protect the system and the air you breathe by collecting dust, dander, spores, and pollen. When not dealt with regularly, this build-up makes the filter less effective, making it work harder and not achieve the same results – clean air!

Time matters

If you have a "smart meter," only use your major appliances

"The highest compliment my clients can give me is the referral of their friends, family and neighbours.

Sales Representative/
Buyer & Seniors
Real Estate Specialist

\$RES

Thank you for your trust."

-Vito

416-928-6833 v.vessio@sympatico.ca www.VitoVessio.com

(dishwasher, washer, dryer, etc.) during off-peak times. A "smart meter" electronically tracks how much electricity a home uses and when it is used. Utility rates can vary throughout the day, depending on demand. So, it's important to be aware of peak and off-peak times to use your appliances. Mondays after work might be the most convenient time for you to do your laundry, but it's also one of the most expensive. Visit the Ontario Energy Board website to learn more about "smart meters" and how peak times are determined.

Pull the plug

Unplug your appliances at night and when not in use for an extended period of time to avoid phantom energy consumption. You might not know this but many of your appliances will continue to draw a small amount of power even when they are not turned on or in use. This is called "phantom power." Unplug appliances, like your TV, computer, or toaster (not your stove or fridge).

Stop losing heat and air

Improve the weatherstripping around your doors and windows, and, where possible, seal the cracks around your home. Homes aren't airtight since we need air to breathe; however, they are usually draftier than we need. Check

your home's exterior and seal any unnecessary openings with weather-resistant sealant. Make sure doors and windows are flush against their frames and sills, and use weatherstripping to fill any gaps. This will help to keep your home at the desired temperature without having your heating and cooling systems working harder than they have to.

We hope these ideas keep your home running more efficiently.
